

Co:Writer 4000

Fast and Dirty Directions:

1. Quit all other open applications
2. Click on **Co:Writer 4000** on the launcher.
3. It will initially ask you for your name if you are a new user.
4. Another screen will come up to ask you about **Choosing another Application. Click OK.**
5. Go to the Apple menu and select **Applications or select AppleWorks** from the launcher.

From Applications, click on *AppleWorks alias*

This will take you to a new AppleWorks document. Select **Word Processing. A new document will appear on the desk top.**

6. To view the **Co:Writer 4000** screen, press the **plus sign +**
7. The user will type a sentence. As soon as punctuation is placed, it will “shoot” to the word processor. The student may then highlight the text and press the read button in AppleWorks for an auditory reading of the sentence.
8. Each writer should have their own file. The program “learns” the writing style of each student and incorporates *their vocabulary* into the word prediction dictionary.
